PROFESSIONAL SUMMARY

Results-driven **Java Backend Developer** with professional experience building **scalable RESTful APIs** and **microservices** using **Spring Boot**, **Spring Security**, **JPA/Hibernate**, **JDBC**, and **MySQL**. Skilled in **JWT**-based authentication, **Role-Based Access Control (RBAC)**, and **ORM** frameworks. Proficient in **XML**-based Spring configuration, **Docker** containerization, and **AWS** cloud deployment. Adept at applying **DTO** and **Builder** design patterns, optimizing SQL queries, and writing clean, modular code following **SOLID** principles — with end-to-end SDLC exposure from architecture through **CI/CD** automation.

TECHNICAL SKILLS

Languages	Java, JavaScript, SQL, XML, HTML5, CSS3, C, C++
Backend	Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JDBC, JWT, Lombok, Swagger/OpenAPI
Database & ORM	MySQL, JDBC Template, SQL Query Optimization, Entity Mapping, XML DataSource Config
Frontend	React.js, Redux Toolkit, Context API, Tailwind CSS, Node.js, JavaScript (ES6+)
DevOps & Cloud	Docker, AWS (EC2, S3), Git, GitHub, CI/CD Pipelines, Maven
Design Patterns	DTO, Builder, Repository, MVC, Microservices Architecture, RBAC, SOLID Principles
Tools	IntelliJ IDEA, VS Code, Eclipse, Postman, MySQL Workbench, Figma

PROFESSIONAL EXPERIENCE

Cynob IT Consultancy <i>Java Backend Developer</i>	March 2025 – March 2026
- Architected and delivered 10+ production-grade RESTful APIs using Spring Boot and Java, applying microservices principles to decouple services and improve maintainability and horizontal scalability. - Engineered a robust authentication and authorization system with Spring Security, JWT token validation, and RBAC, enforcing fine-grained permission policies and eliminating unauthorized access across all endpoints. - Implemented a dual data-access strategy using JPA/Hibernate ORM for entity lifecycle management and JDBC Template for performance-critical queries, reducing DB response time via optimized execution plans. - Designed and maintained XML-based Spring bean configurations and JPA XML mapping files, enabling modular service wiring and zero-downtime migration between configuration styles across legacy modules. - Applied DTO and Builder design patterns across all API layers, enforcing clean separation between persistence entities and API contracts, reducing data-exposure risk by ~40%. - Containerized all backend services with Docker using multi-stage Dockerfiles, establishing consistent dev-to-production environments and eliminating environment-related failures in the CI/CD pipeline. - Optimized complex MySQL queries, indexed high-frequency lookup columns, and tuned JPA entity mappings with LAZY/EAGER fetch strategies — eliminating N+1 problems and improving throughput under high load. - Deployed and managed backend services on AWS (EC2, S3), contributing to 99%+ uptime and enabling auto-scaling configurations for peak traffic handling. - Authored comprehensive Swagger/OpenAPI documentation for all REST endpoints, standardizing contracts and significantly reducing new developer onboarding time. - Led code reviews using Git Flow on GitHub, enforcing unit test coverage requirements and modular architecture standards across the team.	

PROJECTS

FitNexus – Fitness Tracker Application

Spring Boot · Java · Spring Security · JWT · JPA/Hibernate · JDBC · MySQL · XML · Docker · Swagger · Lombok

- Built a full-featured **Fitness Tracker REST API** with user registration, activity logging, personalized workout recommendations, and progress analytics as a production-ready backend system.
- Secured the application end-to-end using **Spring Security** with **JWT** stateless auth, **RBAC** (USER/ADMIN roles), **BCrypt** password hashing, and input validation.
- Designed a normalized **MySQL** schema with **JPA/Hibernate ORM** entity mapping; used **JDBC Template** for complex reporting joins and configured datasource via **XML** for environment-specific profiles.
- Separated API contracts from persistence with **DTO** and **Builder** patterns; containerized with **Docker Compose** and published API specs on **Swagger UI**.

EaseKart – Full-Stack eCommerce Platform

React.js · Redux Toolkit · Context API · Tailwind CSS · JavaScript ES6+ · Node.js · REST APIs · Git

- Developed a **fully responsive eCommerce application** with product listing, cart management, user authentication, and order flow — optimized for mobile-first performance.
- Built **Redux Toolkit** for global state and **Context API** for theming; implemented light/dark mode toggle with **Tailwind CSS** and React hooks.
- Integrated dynamic RESTful APIs for real-time data and translated **Figma** designs into pixel-perfect, accessible UI components.

Admin Dashboard – Data Management Panel

React.js · Redux · Context API · Tailwind CSS · JavaScript · Node.js · Git

- Built a **dynamic admin panel** with real-time data tables, charts, and CRUD management using **React.js** and **Tailwind CSS** with modular component architecture.
- Managed multi-component state via **Redux** and **Context API**, enabling seamless UI updates and role-based view rendering without prop-drilling.
- Converted **Figma** wireframes into reusable HTML5/CSS3 UI components following design system and accessibility best practices.

EDUCATION

A.P.J. Abdul Kalam University, Indore

Master of Computer Applications (MCA)

June 2022 – May 2024

Bhimrao Ambedkar Bihar University, Bihar

Bachelor of Science in Physics (Hons.)

June 2016 – May 2019

CERTIFICATIONS & COURSES

Spring Boot: The Complete Guide

Udemy – Spring Boot, Spring Security, JWT, JPA/Hibernate, JDBC, REST APIs, Docker, AWS

Core Java Programming

Apna College – OOP, Data Structures & Algorithms, Collections, Multithreading, Java Fundamentals

RELEVANT COURSEWORK

Data Structures & Algorithms · Database Management Systems · Object-Oriented Programming · Software Engineering · Computer Networks · Java Application Development · Internet Technologies
